

**AI is becoming more intelligent.
How do we make sure the
wisdom held by communities is
not left behind?**

WHY THIS MATTERS

What happens when disaster does not only destroy homes, but also interrupts livelihoods, knowledge, identity and opportunity?

Livelihood interrupted

Income from land and loom stops while the cost of living carries on.

Knowledge transfer interrupted

Teaching moves to survival. What elders hold is not passed on during a shock.

Identity and opportunity interrupted

People are left to rebuild as beneficiaries instead of as owners of their own capacity.

These communities are not short of intelligence, skill, relationships or assets. Repeated shocks have interrupted their momentum. Field mapping in Adonara, Lembata and Manggarai currently lists 580 active weavers.

THE BIG IDEA

Humanizing AI through *Ancestral Intelligence*

Ancestral intelligence is knowledge that has already been tested for generations: when to plant, which plant gives which colour, what a motif is allowed to say, who may weave it, how a household survives a bad season. It is held by people, carried in practice, and transferred by relationship.

It is data that was never written down, so it disappears when transfer stops.

Technology is the enabler of this intelligence. It is not the hero of the program.

Communities rebuild not from what they lack, but from what they already carry.

THE PROGRAM

beyond tenua

SEED TO LOOM

ADONARA · LEMBATA · MANGGARAI, EAST NUSA TENGGARA

A three-year collaborative pilot that starts from the strengths communities already have, and connects them with technology, teacher capacity, local curriculum, climate action, enterprise incubation and a Local Impact Hub.

WHAT BEYOND TENUN IS

Tenun is the entry point, not the destination.

Not this

Not a handicraft project.

Not a set of unrelated activities funded one at a time.

Not a program that treats a community as a list of needs.

This

An integrated ecosystem intervention. Weaving and ancestral intelligence are the way in. What it connects is livelihood, women, culture, education, technology, climate, enterprise and community resilience, with enterprise-development targets attached.

The program is designed to strengthen community resilience and to build a pipeline of sociopreneurs and new social enterprises at the same time.

HOW IT WORKS

Seed → Loom → Trace → Teach → Regenerate → Hub → Flourish

01

SEED

Restore land, cotton and local ecological knowledge.

02

LOOM

Strengthen skills, culture and women's livelihood.

03

TRACE

Connect weaver, product, story, provenance and impact.

04

TEACH

Build teacher capacity and co-create a locally rooted curriculum.

05

REGENERATE

Climate action beyond carbon, linking ecology, livelihoods and culture.

06

HUB

A Local Impact Hub for capacity building, incubation and enterprise development.

07

FLOURISH

Strengthen agency, dignity, resilience and future opportunity.

Why this order

Each step only holds if the one before it is in place. That is why it is funded as one pathway and not as seven grants.

SEED TO LOOM IS FRAMED AS REVIVAL AND STRENGTHENING BECAUSE THE LAND, BUILDINGS, WEAVING SKILLS AND TRUSTED ORGANIZATIONS ALREADY EXIST

Value returns to the people who hold the knowledge.

Each turn of the loop strengthens transfer. The knowledge is used, paid for, recorded and taught, in that order.

Two capabilities brought in from ICM's expertise network.

Technology platform

- Traceability that connects weaver, product, story and provenance.
- Documentation of knowledge that has never been written down.
- Learning tools, community data and impact visibility for partners.
- Supporting detail: a tag in the cloth carries the maker's record to the buyer and keeps it attached on resale.

Education workstream

- Teacher capacity building with local educators.
- A local curriculum co-created with the community, rooted in ancestral knowledge and connected to future-ready skills.
- Co-created means the community decides what may be taught, recorded and shown.

These are network-enabled capabilities added to the program. They do not replace Torajamelo's community expertise or TBN's ecosystem role.

MANIFESTING THE IDEA OF
A LOCAL IMPACT HUB

THE MECHANISM

The Local Impact Hub is how capacity becomes enterprise.

A place, not a program

One Hub per region, in buildings and institutions that already exist locally.

Run locally

Local leadership is built through the three years so the Hub is not dependent on the partners.

Connected outward

The Hub is the point where the community meets markets, learning networks and the wider ecosystem.

HUB COST PER LOCATION: *[TO CONFIRM FROM THE PILOT BUDGET]*

TBN-ALIGNED OUTPUTS

An enterprise-development pipeline, not only a resilience program.

>1,000
sociopreneurs developed

Through training, mentoring, community practice and Local Impact Hub pathways.

>5
new social enterprises

Incubated or launched from community opportunities identified through the program.

These are program targets to be measured over the three-year pilot, not guaranteed outcomes. The Hub is the mechanism that connects capacity building to incubation, enterprise development and market access.

Restore. Regenerate. Flourish.

THE THREE-YEAR JOURNEY

Restore. Regenerate. Flourish.

Year 1

RESTORE

Recover and reactivate after the shock. Bring land, looms and local institutions back into use, and establish the foundation the next two years stand on. Assessment is the first task, not the purpose.

Foundation established

Year 2

REGENERATE

Grow capacity, enterprise, learning, technology and climate resilience together, so income and knowledge transfer rise at the same time.

Capacity compounding

Year 3

FLOURISH

Deepen local leadership, sustainability, market connection and knowledge sharing, and capture what other communities can learn from the pilot.

Locally led

Three years lets the partnership follow the pace of community transformation instead of funding isolated activities.

WHO DELIVERS IT

The local community is the center. The organizations sit around it.

Local community

Center of ownership, value and voice. Owns the knowledge, the decisions and the direction.

Torajamelo

Community and enterprise partner.

ICM

Catalyst, program architect and knowledge amplifier. Mobilizes technology and education capability.

TBN

Human flourishing and ecosystem partner. Strengthens the pathway to sociopreneur and enterprise development.

Impact Partners

Catalytic capital and strategic support across the three-year pathway.

COMPLEMENTARY AND EQUAL PARTNERS · NO ORGANIZATION IS THE BOSS OF THE ECOSYSTEM

WHERE IT STARTS

Start local, prove the model, capture the learning, then adapt it responsibly.

Adonara

Existing weaving practice and community-rooted organizations.

Lembata

Existing local skills, land and assets to build from.

Manggarai

Established relationships that shorten the time to start.

These three locations in East Nusa Tenggara were chosen because the foundations already exist there. The learning from the pilot is designed to become relevant to a wider network of communities, once it is proven and documented. Field mapping currently lists 580 active weavers across the three locations.

BEFORE YEAR ONE

We go to the ground first. Nothing in this plan is designed from a desk.

October 2026

Assessment trip to six sites

USD 15,000

Findings and priority needs documented

Nov 2026 – Feb 2027

Post-assessment: review, validate, report

USD 5,000

Site designs and implementation plans developed

Year 1 · H1

Groundwork begins on the findings

Restore

Photo, video and technical documentation completed

USD 20,000 buys the evidence. Every renovation, cotton plot and hub design in this deck is confirmed on site, with the community, before it is funded.

What we check on site before we design anything.

 Community consultation and needs

Discussions with weavers, leaders and partner organizations. What is interrupted, what still works.

 Site and building assessment

Earthquake damage, safety, functionality and renovation needs of the community buildings.

 Land and cotton assessment

Identify and verify potential cotton plots, land condition and access.

 Weaving ecosystem assessment

Map existing looms, skills, production capacity and gaps.

 Design and site documentation

Measurements, site mapping, sketches, photo and video record.

 Community priorities and aspirations

Locally preferred solutions and where ownership sits. The community decides what comes first.

Three checks look at things: buildings, land, looms. Three look at people: needs, capacity, priorities. The plan only holds when both agree.

SIX SITES · ONE SHARED RECOVERY CHALLENGE

The communities we sit with, and who already stands beside them.

Site	District	Local partner organization	Weavers
Lodan Due · Senitawa	Adonara, East Flores	PEGAS PEKKA	250
Kerubaki	Lembata	PEGAS PEKKA	incl. above
Doka	Sikka, Flores	Sanggar Doka Tawa Tana	80
Cibal	Manggarai	DEKRANASDA Manggarai	250
Mapped to date			580

THREE SHOCKS IN SIX YEARS

COVID-19

Cyclone Seroja

2026 earthquake

Each shock interrupted livelihoods and community resilience. The trauma needs healing as part of recovery, which is why capacity building here is body, mind and soul, not skills alone.

FROM FINDINGS TO A 36-MONTH ROADMAP

The trip produces the plan. The plan runs in six-month steps.

Year 1 · Restore

H1 · Months 1–6

Groundwork

Community consultations across the sites, validation of earthquake impact on buildings, renovation and land-use plans, cotton plots confirmed with each partner.

H2 · Months 7–12

Renovation and planting

Building renovation begins across the centers. First local cotton planting. Mentorship pairs elders with younger weavers.

Year 2 · Regenerate

H1 · Months 13–18

Center activation

Centers operational as renovation completes. First cotton harvest and processing. Weaving production scales up.

H2 · Months 19–24

Growth

Second planting and harvest cycle. Expanded product range and sales. Deeper mentorship cohorts. First visitors on community-set terms.

Year 3 · Flourish

H1 · Months 25–30

Deepening

Third cotton cycle. Centers refine sales models on two years of experience. Partners take on more independent coordination.

H2 · Months 31–36

Consolidation and handover

Community-led evaluation across all sites. Learning documented. Full operational responsibility passes to local partners.

THE INVITATION

USD 1M

for a three-year Beyond Tenun Impact Partnership. We are building a small consortium of committed Impact Partners who will walk with the communities from restoration to regeneration and flourishing.

Not a one-off sponsorship. Not crowdfunding. Suitable capital: grants, philanthropic funding, catalytic capital, corporate or foundation partnership.

INDICATIVE USE OF FUNDS

Assessment trip and post-assessment, six sites	USD 20,000
Community program, three communities × three years Capacity building (body, mind and soul), public awareness, physical structure · USD 100,000 per community per year	USD 900,000
Technology platform, local curriculum, Hub coordination and learning	<i>[balance · to confirm]</i>
Toward >1,000 sociopreneurs and >5 new social enterprises	USD 1,000,000

IF A FINANCIAL-RETURN OPPORTUNITY EMERGES FROM LOCAL ENTERPRISES, IT IS STRUCTURED SEPARATELY FROM THE CATALYTIC PROGRAM FUNDING

HOW THE PARTNERSHIP WORKS

Partnership, learning and accountability,
reported every six months.

What partners commit

Capital and strategic support across the three-year pathway, not a single-year grant cycle.

What partners receive

The post-assessment report first, then progress against each six-month step of the roadmap, and the learning the pilot produces.

How progress is measured

Sociopreneur and enterprise targets, Hub development, cotton cycles completed, knowledge documented and community-reported outcomes.

Feb 2027 Post-assessment report and roadmap	Year 1 Renovation under way, first cotton planted, elder–youth mentorship running	Year 2 Centers operational, first harvest processed, product range and sales expanding	Year 3 Community-led evaluation, learning documented, handover to local partners
---	---	--	--

End goal, in the communities' own words: body, mind and soul. Dignity.

BEYOND TENUN — SEED TO LOOM

Reviving ancestral intelligence. Building resilient communities. Enabling human flourishing.

A three-year Impact Partnership by ICM, TBN and Torajamelo, beginning in Adonara, Lembata and Manggarai. First step: on the ground in October 2026.

LET'S CONTINUE THE CONVERSATION · [\[CONTACT NAME · EMAIL\]](#)

TBN CONFERENCE 2026

Guardrail check against the message framework.

Community at the center

Held. Slide 12 puts the community above the partners; slides 15–16 name the local organizations on the ground.

Technology as enabler, not hero

Held. Trace is one of seven steps; the platform is framed as capability infusion.

Ask is a partnership

Held. No equity, round or donation language. Budget lines now sourced from the 4 Sep 2026 field plan.

Not a weaving project

Held. Slide 5 separates entry point from destination; the roadmap covers land, buildings, learning and enterprise.

Targets, not promises

Held. Slide 10 states the targets as measured over the pilot.

Still open

Allocation of the USD 80,000 balance to technology, curriculum and Hub coordination; the contact line. Note: the field plan lists Doka (Sikka) as a fourth community while the message framework names three locations. Align before presenting.
